Chlorophyll, the green pigment found in a plant's leaves, is a key ingredient in the process of photosynthesis. It also makes great paint!

For this project you will need:

- A piece of paper
- 8-10 leaves
- a metal spoon

To make your painting:

1. Collect some good, green leaves from your yard. Be sure to get a variety... some work better than others and you'll have to experiment with what works best!
2. Arrange your leaves over the empty branches on your print out. Place the blank piece of paper over top of the leaves.
3. Press firmly on the leaves between the pages and rub with a metal spoon. You will have to press pretty hard! Avoid plastic spoons, as they can break when pressed firmly.
